TEST PROCEDURE

TEST INTERPRETATION

Why choose bioNexia[®] FOBplus ?

- Cost-effective method of population screening¹
- Much more sensitive than Guaiac-based tests²
- Easy-to-use, all-inclusive kit
- Results available in just 5 minutes

Clinical Background

- Colorectal cancer (CRC), also known as bowel cancer, is one of the most common causes of death from cancer.³ It is known that early removal of adenomatous polyps, potential pre-cancers, which tend to bleed frequently, reduces the risk of CRC.⁴
- Without automatically pointing to bowel cancer, the detection of fecal occult blood (FOB) indicates that the patient may require further investigations and treatment.
- A positive FOB result should always be followed-up by a second test or by further investigations, such as colonoscopy.

Technical data

- Reference: 410594 (25 Tests)
- Cut-off: 40 mg/L
- Shelf-life: 24 months
- Storage temperature: +2°C to +30°C
- Content of the kit:
 - 25 test cassettes
 - 25 sample collection sets incl. sample collection card, stool collection paper and stool collection tube
 - 1 package insert
 - 1 quick guide

Dimensions of the kit

- Length: 236 mm
- Width: 205 mm
- Height: 155 mm
- Weight: 1282 g
