

bioNexia[®] hCG Combo
 is a rapid one-step chromatographic test
for the qualitative detection
of human chorionic
gonadotropin (hCG)
 in urine or serum

bioNexia[™]

TEST PROCEDURE

TEST INTERPRETATION

Why choose bioNexia[®] hCG Combo?

- Adapted sensitivity to aid in the early detection of pregnancy: 25mIU/ml on urine and serum
- Proven specificity > 99%
- Results available in just 3 minutes for urine, 5 minutes for serum
- Easy-to-use, all-inclusive kit

Clinical Background

- Human chorionic gonadotropin (hCG) is a glycoprotein hormone produced by the developing placenta during pregnancy.
- In normal pregnancy, hCG levels can be detected in both urine and serum soon after conception.^{1,2,3,4} hCG levels continue to rise very rapidly, frequently exceeding 100 mIU/mL by the first missed menstrual period^{2,3,4} and peaking in the 100,000-200,000 mIU/mL range about 10-12 weeks into pregnancy. hCG levels then decline rapidly during the second trimester and remain low for the rest of the pregnancy.³
- The appearance of hCG in both urine and serum soon after conception, and its subsequent rapid rise in concentration during early gestational growth, make it an **excellent marker for the early detection of pregnancy.**

Technical data

- Reference: 413821 (30 tests)
- Cut-off: 25 mIU/ml
- Shelf-life: 24 months
- Storage temperature: +2°C to +30°C
- Content of the kit:
 - 30 test cassettes
 - 30 disposable pipettes
 - 1 package insert
 - 1 user quick guide

Dimensions of the kit

- Length: 210 mm
- Width: 130 mm
- Height: 83 mm
- Weight: 427 g
